

Events Handled

The CCure 9000 XProtect Access (XPA) integration will attempt to handle all the events generated by CCure. The actual events handled may vary from one version of CCure to another. There may also be other circumstances that affect if the integration can handle an event or not (e.g. the CCure API used by the integration doesn't forward the event, the event relates to a type of hardware not supported in the integration, etc).

Example Event List

This list of events came from a CCure 9000 2.9 system captured on Dec 8th, 2022 and is listed here only as an example of the events supported by the CCure XPA integration. All the events that exist in all supported versions of CCure 9000 may not be included in this list. Please contact Milestone Technical Support if a required event is not listed here. The event list has been sorted alphabetically.
